## Small Frequency Converter

## Operation Manual

## $220 \mathrm{~V} \quad 0.4 \mathrm{KW}-5.5 \mathrm{KW}$ $400 \mathrm{~V} \quad 0.4 \mathrm{KW}-11.0 \mathrm{KW}$

- Please read this Manual carefully and understand the content, so as to correctly install and use the converter.
- Please give this Manual to the end user and properly keep it.
- The technical specifications of the converter is subject to change without prior notice.

## Solemn Statement

Thank you for using this frequency converter. Before use, please read this Manual carefully to familiarize yourself with the safety precautions of this product.

## Safety Precautions:

1. Before wiring, please check whether the input power is off.
2. The wiring should be carried out by professional electricians.
3. The grounding terminal must be grounded.
4. After the completing the emergency stop circuit wiring, please check whether the emergency stop action is effective.
5. Do not connect the output line of the frequency converter to the housing. Do not short circuit the output line.
6. Please confirm whether the voltage of the AC main circuit power supply is consistent with the rated voltage of the converter.
7. Do not carry out voltage resistance test on the frequency converter.
8. Please connect the brake resistor according to the wiring diagram.
9. Do not connect the power cord to the output terminals $\mathrm{U}, \mathrm{V}$ and W .
10. Do not connect the contactor to the output circuit.
11. Be sure to install the protective housing before powering on. Be sure to disconnect the power supply before removing the housing.
12. Do not place the frequency converter with reset retry function near the mechanical equipment. Because it will suddenly restart when the alarm stops.
13. It can alarmand reset only after confirming that the running signal is cut off. If it alarms and resets in the running signal state, the frequency converter may start suddenly.
14. Do not touch the terminal of frequency converter. There is high voltage on the terminal, which is very dangerous.
15. Do not change wiring and disassemble terminals during power-on.
16. The inspection and maintenance should be carried out after the main circuit power supply is cut off.
17. Please do not modify the frequency converter without permission.

## 1. Technical data

## Rated data of frequency converter

| Model | Power | Input power | Outpu power (A) | Dimensions $\mathrm{L} \times \mathrm{W} \times \mathrm{H}(\mathrm{mm})$ | $\begin{array}{\|c\|} \hline \text { Mounting size } \\ \text { L×W - } \\ \text { Mounting } \\ \text { screws (mm) } \\ \hline \end{array}$ |

## 2. Installation and wiring

## Purpose of the terminals

| Terminal | Purpose | Design description |
| :---: | :---: | :---: |

| R, S, T | Converter power supply: 380 V converter is to connect R, S, T 220 V converter is to connect R, S or R, T (according to the terminal label) | The front end of the input power supply of the converter should use the air switch as the overcurrent protection device. If the leakage protection switch is added, in order to prevent the misoperation of the leakage switch, please select the equipment with a sensitivity of more than 200 mA and an operation time of more than 100 ms . |
| :---: | :---: | :---: |
| U, V, W | Converter output, to connect the motor | In order to reduce leakage current, the motor connection line should not exceed 50 meters. |
| PE | Grounding | Frequency converter should be well grounded. |
| X1 | Digital input X1 | Set by parameter F5.02, the factory default is forward |
| X2 | Digital input X2 | Set by parameter F5.03, the factory default is reverse |
| X3 | Digital input X3 | Set by parameter F5.04, the factory default is multi-speed first |
| X4 | Digital input X4 | Set by parameter F5.05,the factory default is multi-speed second |
| X5 | Digital input X5 | Set by parameter F5.06,the factory default is external reset signal input |
| GND | Signal common terminal | Zero potential of input and output signal |
| AVI | 0-10 signal input | 0-10V |
| 10 V | Power supply for frequency setting potentiometer | $+10 \mathrm{~V}, 10 \mathrm{~mA} \mathrm{Max}$ |
| ACI | $4-20 \mathrm{~mA}$ analog input | 4-20mA |

| AO | Analog output signal | Set by parameter F6.10 |
| :---: | :--- | :--- |
| TA, TB, TC | Relay output | Set by parameter F5.07 <br> Contact capacity: AC $250 \mathrm{~V} / 3 \mathrm{~A}$ <br> DC 24V/2A |

## 3. Commissioning and operating

## (1) Operation panel and operation method

Method of returning to the original interface after setting parameters:

1. Power off and then power on again. 2. Select d-00 and press SET. 3. Longpress the SET key.

Output frequency displayed
when power-on

## (2) Set the run command mode of frequency

The run command mode of frequency converter is set by parameter F .02 : There are two start-stop modes: panel control start-stop mode and terminal control start-stop mode
(1) Panel control start-stop mode: (Factory setting for panel start-stop is F0.02=0)
To use the panel control stat-stop frequency converter, press the green button on the panel to start, and the red button to stop. The converter starts with forward run by default, and the forward or reverse run needs to be set through the input terminal $\mathrm{X} 1-\mathrm{X} 5$ (the reverse setting is 4).
(2) Terminal control start-stop mode: (Factory setting for terminal start-stop is F0.02=1)

Two-wire control mode 1

Three-wire control mode 1

## (3) Select ion of frequency sett ing mode of

The frequency setting mode of the converter is set by parameter F0.03. When $\mathrm{F} 0.03=4$, the running frequency is set by potentiometer, When $\mathrm{F} 0.03=2$, the running frequency is input by $\mathrm{AVI}(0-10 \mathrm{~V}$ potentiometer can be connected externally); When $\mathrm{F} 0.03=3$, the running frequency is input by ACI $(4-20 \mathrm{~mA})$; When $\mathrm{F} 0.03=1$, it is controlled by the extemal terminal (the switching value is set to be increasing/decreasing frequency).

## 4. Table of parameters

| Para meter s | Name | Factory default value | Setting range | Description |
| :---: | :---: | :---: | :---: | :---: |
| Group F0 - Basic running parameters |  |  |  |  |
| F0.00 | Converter power | Based on the model | 0.0-99.9kw | Current converter power |
| F0.01 | Control mode | 0 | 0-1 | $\begin{aligned} & \hline \text { 0: V/F control } \\ & \text { 1: open-loop vector } \end{aligned}$ |
| F0.02 | Run command selection | 0 | 0-1 | 0: Panel run command <br> 1: Terminal run command |
| F0.03 | Primary frequency source X selection | 4 | 0-7 | 0 : Digital setting (preset frequency F0-07, UP/DOWN, modifiable according to the value of $\mathrm{F} 0-07$, no memory of power failure) <br> 1: Digital setting (preset frequency F0-07, UP/DOWN, modifiable according to the value of $\mathrm{F} 0-07$ memory of power failure) <br> 2: AIl (AVI) <br> 3: AI2(ACI) <br> 4: AI3 (keyboard potentiometer) <br> 5: Multi-speed instruction <br> 6: Simple PLC <br> 7: PID |
| F0.04 | Auxiliary frequency source Y selection | 0 | 0-7 | Same as F0.03 |
| F0.05 | Operation of primary and auxiliary frequencies | 0 | 0-3 | 0: primary + auxiliary 1: primary - auxiliary 2: greater of the two values 3: smaller of the two values |
| F0.06 | Frequency source selection | 0 | 0-4 | 0 : Primary frequency source X <br> 1: Operation result of primary and auxiliary frequencies (determined by operation F0.05) |

| Para meter s | Name | Factory default value | Setting range | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | 2: switch between primary frequency source X and auxiliary frequency source Y <br> 3: switch between primary frequency source X and operation result of primary and auxiliary frequencies 4: switch between auxiliary frequency source Y and operation result of primary and auxiliary frequencies |
| F0.07 | Frequency digit setting | 50.00 Hz | 0Maximum frequency | The set value is the given initial value of the frequency digit |
| F0.08 | Maximum output frequency | 50.00 Hz | Upper limit frequency 400.0 Hz | The maximum output frequency is the maximum frequency allowed by the converter, which is the benchmark for acceleration/deceleration setting. |
| F0.09 | Upper limit frequency | 50.00 Hz | Lower limi frequency Maximum output frequency | The running frequency cannot exceed such frequency |
| F0.10 | Lower limit frequency | 0.00 Hz | $\|$$0-$ Uppe <br> limit  <br> frequency  | The running frequency cannot be lower than such frequency |
| F0.11 | Treatment when reaching the lower limit frequency | 0 | 0-2 | 0: Zero-speed running <br> 1: Run at the lower limit frequency <br> 2: Shut down |
| F0.12 | First acceleration time | 10.0s | 0.1~999.9 | Time required for the converter to accelerate from zero to maximum output frequency |
| F0.13 | First <br> deceleration time | 10.0s | 0.1~999.9 | Time required for the converter to decelerate from maximum output frequency to zero |
| F0.14 | Running direction | 0 | 0-2 | 0 : forward, 1: reverse, 2: reverse prohibition <br> This selection between forward and reverse is valid only when the |

| $\left.\begin{gathered} \text { Para } \\ \text { meter } \\ \mathrm{s} \end{gathered} \right\rvert\,$ | Name | Factory default value | Setting range | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | command comes from the panel. The reverse prohibition is valid no matter where the command comes from. |
| F0.15 | User password | 0 | $0 \sim 9999$ | The password takes effect when a non-zero digit is set. If 0000 is set after decryption, the password function is disabled. |
| F0.16 | Software version | XX.xx | 01.00-99.9 | Current software version. (Some parameters in this Manual match software versions after 2.35) |
| F0.17 | Parameter initialization | 0 | 0-3 | 0: no operation <br> 1: Restore factory default value (excluding motor parameters) <br> 2: Fault clearing <br> 3: Restore all parameters to factory default values (including motor parameters) |
| F0.18 | Frequency decimal point | 2 | 1~2 |  |
| F0.19 | Retain |  |  |  |
| F0.20 | Holding of digital set stop | 1 | 0~1 | $\begin{aligned} & \text { 0: No hold } \\ & 1: \text { Hold } \\ & \hline \end{aligned}$ |

| F9.05 | Parameter identification | 0 | $0 \sim 1$ | 0: Disable parameter identification; 1: Enable static identification of parameters, automatically set to 0 at the end of identification; |
| F9.06 | Stator resistance | Based on the model | $\begin{aligned} & 0.001 \sim \\ & 65.535 \Omega \end{aligned}$ | For different models, there are corresponding default values, and parameter identification will automatically change the value; |
| $\left\|\begin{array}{l} \text { F9.07 } \\ \sim \\ \text { F9.09 } \end{array}\right\|$ | Rotor resistance, leakage inductance, mutual inductance, etc | Based on the model |  | For different models, there are corresponding default values, and parameter identification will automatically change the value; |
| F9.11 | No-load current | Based on the model | $0.01 \sim$ | To set no-load current of motor; For different models, there are corresponding default values, and parameter identification will automatically change the value; |
| Group FA - Protection parameter setting |  |  |  |  |
| FA. 00 | Overload protection | 00 | 0000~9999 | Units digit: Enable motor overload Tens digit: Enable converter overload warning ( 1 : terminal function output), enable converter overload warning: 2 : terminal function output, outage report |
| FA. 01 | Motor overload protection factor | 100\% | $\begin{aligned} & 30 \% ~ \\ & 110 \% \end{aligned}$ | The motor overload protection factor is the percentage of the rated current value of the motor to the rated output current value of the frequency |

| Para meter s | Name | Factory default value | Setting range | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | converter. |
| FA. 02 | Undervoltage protection level | 180/360V | $\begin{aligned} & 150-280 \\ & 300 \sim 480 \mathrm{~V} \end{aligned}$ | This function code specifies the minimum allowable DC bus voltage when the converter is working normally. |
| FA. 03 | Overvoltage stall enable | 1 | 0~1 | 0: Disable 1: Enable |
| FA. 04 | Overvoltage limit level | $375 / 720 \mathrm{~V}$ | $\left.\begin{array}{\|l} 350-380 \\ 660 \sim 790 \mathrm{~V} \end{array} \right\rvert\,$ | The overvoltage limit level defines the operating voltage for overvoltage stall protection |
| FA. 05 | Current limiting level | 150\% | $\begin{aligned} & 30 \% ~ \\ & 200 \% \end{aligned}$ | The current limiting level defines the threshold of current for the automatic limiting operation, and its set value is a percentage relative to the rated current of the frequency converter. |
| FA. 06 | Frequency drop rate during current limiting | 0 | $\begin{aligned} & 0 \sim \\ & 99.99 \mathrm{~Hz} / \mathrm{s} \end{aligned}$ |  |
| FA. 07 | Selection of current limiting action | 0 | $0 \sim 2$ | 0: Void 1: Acceleration/deceleration is effective, and constant speed is ineffective <br> 2: Acceleration/deceleration is effective, and constant speed is effective |
| FA. 08 | Converter overload alam level | 120\% | $50 \sim 150 \%$ | It refers to the threshold of current for converter overload alam action, andits set value is the percentage relative to the rated current of the converter. |
| FA. 09 | Converter overload alam delay | 5.0s | 0.0~15.0s | It refers to the delay time from the moment that the output current of the frequency converter becomes continuously greater than the overload alarm level (FA.08) to the moment that the overload alarm signal is sent. |
| FA. 10 | Oscillation suppression coefficient | 30 | $0 \sim 200$ | Generally, when motor oscillation occurs, the oscillation suppression coefficient should be increased. |
| FA. 11 | Amplitude | 20 | 0~1000 | To set the maximum amount of |

| Para meter s | Name | Factory default value | Setting range | Description |
| :---: | :---: | :---: | :---: | :---: |
|  | suppression coefficient |  |  | adjustment for oscillation suppression. |
| FA. 12 | Oscillation suppression lower limit frequency | 5.00 Hz | 0.0 ~ Oscillation suppression upper limit frequency (200.00Hz) | Oscillation suppression is ineffective when it is below such frequency. |
| FA. 13 | Oscillation suppression upper limit frequency | 50.00 Hz | Oscillation suppression lower limit frequency (0) ~ 200.00 Hz | Oscillation suppression is ineffective when it is above such frequency. |
| FA. 14 | Retain |  |  |  |
| FA. 15 | Retain |  |  |  |
| FA. 16 | Number of automatic fault resets | 0 | $0 \sim 10$ | When the reset number is set to 0 , the automatic reset function is disabled except for manual reset. 10 means that the reset number is not limited. |
| FA. 17 | Automatic fault reset interval time | 3.0s | $0.5 \sim 25.0 \mathrm{~s}$ | To set the automatic fault reset interval time |
| FA. 18 | VF overcurrent/ove rvoltage suppression enable | 3 | 0~3 | 0: no operation <br> 1: Enable overcurrent suppression <br> 2: Enable overvoltage suppression <br> 3: Enable overcurrent/overvoltage suppression |

## Service Delivers Value, Quality Builds Brilliance

## To users:

Thank you for using our products. In order to ensure that you get the best after-sales service from our company, please carefully read and follow the following terms.

## 1. Product warranty coverage

Any fault that occurs under normal use according to the use requirements will be covered by the warranty.

## 2. Product warranty period

The warranty period of this product is twelve months from the date of delivery. After the warranty period, we will provide a long-tem technical support.

## 3. Circumstances that not covered by the warranty

Any violation of the use requirements and damage due to human causes, natural disasters or flooding water, extemal damage, bad environment and other reasons, as well as the disassembly, modification and maintenance of the frequency converter without permission, will not be covered by this warranty.

## 4. Purchase this product from a reseller

If the product is purchased from a distributor or an agent, please contact such distributor or agent in case of any fault.

Please keep this Manual properly in case of need.
